Air-Filled Bird Balls™

The original solution to cover open surface water

Air-Filled Bird Ball™

The Original solution to cover open surface water

What are they? A simple solution to deter birds from open water ponds, open mines, airports and rain water collection basins. Waterfowl attracted to areas of open water put themselves and humans at risk. A floating layer of **Air-Filled Bird Balls™** successfully camouflages the liquid and birds fail to recognise the ponds.

Bird Balls™ are 100mm diameter UV stabilised black hollow plastic balls, manufactured in High Density Polyethylene. When deployed the balls float on the surface of a liquid, automatically arranging themselves into a close packed formation to completely cover the liquid. Ideally suited for tanks with a freeboard over 500mm, ponds and lagoons with levels below the surrounding area or any liquid partially sheltered from strong winds.

For open surfaces and tanks such as:

- Waste water
- Biomass
- Slurry lagoon
- Dangerous materials
- Koi carp and fish pools
- Heated or cooled open surface tanks
- Airports' ponds (camouflage)

Installation is incredibly quick and easy as they act as a fluid component to pour onto any surface. When settled onto the liquid they interlock to form a flexible blanket which moves to accommodate differing water levels.

The naturally close formation of the **Air-Filled Bird Balls™** offer a decrease of liquid loss through evaporation plus a reduction of odours by up to 90%.

Advantages

- Quick and simple install
- Surface coverage up to 90%
- Accommodates floating pump barges or aerators
- Lowers ice formation by 10°C
- UV Stabilised with over 10 years life expectancy
- No running costs
- Reduces algae growth by blocking sunlight
- Spread automatically as liquid levels rise and fall

Technical details

Material:

Black UV stabilised High Density Polyethylene

Ball Diameter:

100mm / 4"

Surface coverage:

Approximately 116 balls per m²

Weight:

40g
